Opus Utility Services Ltd - C2 NFSMR Testing Results Summary

l	Key		
	GREEN	Category A	The material is within specification for those tests undertaken on the material delivered and provided it is laid correctly, should present no problem
_			
	AMBER	Category B	Materials can be considered satisfactory and in practice, will give no significant difference in performance compared to a category A material as they are marginally out of specification and generally fall within the limits of repeatability.
		, ,	
		Category C	These materials are out of specification and the performance of the material maybe adversely affected. These materials are unacceptable and use should be stopped until a way forward between the Client, HA, Recycle group & UKAS Lab has been agreed.

^{* 7} day CBR test is a suggested test and not a requirement. The reason for suggesting the test is for best practice and to give the producer and customer comfort that the stiffness modulus being achieved is equivalent to traditional subbase materials such as Type 1 803.

Date Sampled	Client Sample Ref	Lab Sample Ref	Compressive Strength (Weekly)	PSD (weekly)	Constituent Analysis (monthly)	Immediate Bearing Index (monthly)	* 7 Day CBR (monthly)	OMC & MDD (3 monthly)	Frost Heave (6 monthly)
